Pipenv and Venv

1. Pipenv

1. Create a folder

Here we are going to create the folder where storage the environment.

2. Enter to the folder

3. Install pipenv (Only if it isn't installed)

```
pip install pipenv
```

4. Activate pipenv

```
pipenv --python 3.9
```

This will create the Pipfile.

5. Copy and paste requirements.txt

6. Install the libraries

```
pipenv install -r requirements.txt
```

7. Activate the environment

```
pipenv shell
```

8. Deactivate

```
deactivate
```

It isn't necessary create the requirements file because all the dependencies are specified in the Pipfile.

2. Virtualenv

1. Create a folder

Here we are going to create the folder where storage the environment.

2. Enter to the folder

3. Install virtualenv (Only if it isn't installed)

```
pip install virtualenv
```

4. Create virtualenv

```
python -m virtualenv test_env --python=python3.9
```

This will create a folder with the name of the environment.

5. Activate the environment

```
source test_env/bin/activate
```

5. Copy and paste requirements.txt

6. Install the libraries

```
pip install -r requirements.txt
```

7. Create requirements

```
python3 -m pip freeze > requirements.txt
```

8. Deactivate

```
deactivate
```
